

Instructions

Step 1

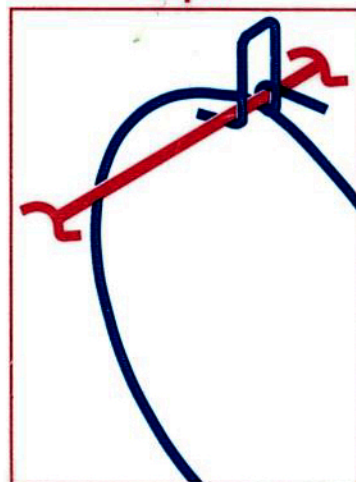

Thread one end of the K-CLIP® through one of the holes of the plastic flag.

Step 2

With your thumb on the loop side of the K-CLIP® and index finger on the hook side, compress the K-CLIP® causing the hook to pass through the loop; so as to create a sufficient gap for the fence wire to fit between the hook & loop.

Step 3

With the fence wire between the compressed hook & loop, release finger compression allowing the fence wire to be secured between the hook & loop, as the hook passes back through the loop.
